Rail Batyrshin

SUMMARY

Frontend Engineer with 5 years of experience building production-grade web and mobile products in React, TypeScript, and modern UI frameworks. Delivered multiple platforms from scratch, including A/B testing tools, AI-driven interfaces, and cross-platform apps, and independently shipped a SaaS MVP. Open-source contributor and technical writer.

SKILLS

Frontend:	HTML, CSS, JavaScript, TypeScript, React, Next, Vue, Nuxt, React Native, Redux, Redux Toolkit, RTK Query, TanStack, MSW
Backend:	Node.js / Bun, Hono, PostgreSQL, Drizzle ORM, AWS S3
Tooling:	Vite, webpack, API integration, Responsive/Adaptive UI/UX design

---

EXPERIENCE

Frontend Engineer, MadDevs - Bishkek, Kyrgyzstan *Jun 2021 - Present*

Project: Enji (Aug 2021 - Sep 2021, Sep 2022 - Aug 2023)

- Collaborated with founders to translate initial business requirements into actionable technical specifications
- Developed front-end architecture and implemented responsive UI components for all pages using **Vue 3** and **Quasar** framework, enabling a functional MVP for early user testing
- Integrated API endpoints to enable smooth data flow between front-end and back-end services, reducing data errors and improving reliability
- Ensured cross-browser compatibility and optimized user experience across devices
- Conducted unit testing and debugging to maintain functionality and minimize integration issues

Project: maddevs.io (Sep 2021 - Sep 2022)
Official company website

- Planned, developed, tested, and maintained the front-end of the company website using **Vue 2**, **Nuxt.js**, and **SCSS**, ensuring responsive design across all devices
- Integrated **Prismic CMS** to allow easy content management and dynamic page updates
- Created adaptive and reusable slides for internal pages, improving content consistency and reducing future development time
- Integrated third-party APIs (**Mailgun**, **mad-radiator**) to automate analytics collection from Google Analytics, Glassdoor, Quora, and Reddit, delivering structured reports to Telegram and Slack
- Optimized front-end performance, reducing page load times and improving user experience

Project: WalletPool (Mar 2023 - Aug 2023, Sep 2023 - Jun 2025)
*Platform for team-based cryptocurrency asset management. Worked on front-end development using **React**, **Next.js**, **Chakra UI**, and **Web3** technologies*

Sub-project: **Crypto Marry**

- Developed responsive UI components and dashboard for team crypto management using **React**, **Next.js** and **Chakra UI** components library
- Integrated **Web3** features for wallet interactions and transaction tracking
- Ensured smooth performance and cross-browser compatibility

Sub-project: **Joiny**

- Built user interfaces and interactive forms for managing crypto assets within teams
- Implemented Web3 integrations for secure data transactions and wallet operations
- Conducted unit testing and debugging to maintain high reliability

Project: Optux (Aug 2023 - Jun 2025)
*Platform for A/B testing websites. Developed full front-end from scratch using **React** and **Chakra UI***

- Architected and shipped the full front-end from scratch - main pages, editor, analytics dashboard, and settings - enabling the platform to reach production
- Developed a custom iframe-based editor for modifying third-party website pages, enabling live **A/B testing** functionality
- Implemented interactive analytics charts by processing raw backend data, giving users real-time visibility into test results
- Mocked backend responses with **MSW** to enable reliable unit testing independently of API readiness
- Collaborated with backend developers on API design to ensure clean data contracts across the stack

Project: AI True PMF (Jun 2025 - Aug 2025)
*Platform for validating startup ideas using AI-driven lead generation and team collaboration. Developed front-end using **React** and **TanStack** ecosystem*

- Built interactive dashboards and session pages to manage experiments and track results
- Implemented real-time collaboration and online chat using **WebSockets**
- Integrated **AI** workflows to identify potential client companies and prioritize leads from cold call transcripts
- Designed responsive UI components for seamless cross-device experience
- Collaborated with backend developers to ensure smooth data flow between AI services, chat, and dashboards

Project: Vivio (Aug 2025 - Present)
*Cross-platform dating platform. Maintained and developed web interfaces, admin panels, and mobile apps using **React**, **React Native**, and **TanStack** ecosystem*

- Resolved Google Play Console 16KB page alignment requirement, enabling successful app publication
- Migrated forms to TanStack Form with Zod validation, modernizing the codebase across multiple apps
- Implemented new features and performance optimizations across 12 interconnected applications
- Maintained consistent functionality across web, admin, and mobile platforms with shared codebase architecture

---

EDUCATION

Master's degree in Radio Engineering, OmSTU, Russia, Omsk *Jul 2013*

PROJECTS & CONTRIBUTIONS

Side Projects:

- Testless - Independently designed and shipped a fullstack SaaS MVP in 1 month. AI-powered A/B testing platform: AI-generated landing page variants, cookie-based traffic splitting, real-time analytics with automatic winner detection. Stack: TypeScript, Bun, Hono, PostgreSQL, Drizzle ORM, React, TanStack, Astro, AWS S3, Groq AI.

Open-source contributions:

- Chakra UI
- Hono+Supabase+React+TanStack (My JWT Auth example)
- CV Template PR
- Vocably — a language-learning tool

Articles:

- Custom Hook for reactive localStorage in React
- Two approaches to implement slots in React
- The Longest Common Prefix String
- Building a Simple Before-After Comparison Slider with Vue 2

- AbortController and Event Listener Management
